The story

We are Kast. A design-led business based on the edge of Sherwood Forest, in the heart of the UK. Specialists in the design and manufacture of contemporary concrete products, we design and make everything from our factory in the UK and deliver worldwide.

Kast's founder, Tim Bayes, fell in love with concrete over 20 years ago. Growing up in Switzerland, he was inspired by their use of concrete, manipulating it into unique shapes and forms. Drawn to the purity of this material, Tim realised the potential it had for contemporary product design.

With a natural affinity towards engineering and a degree in Fine Art, he began working with this 'liquid stone' and was convinced that it could become the ideal material for interior products.

From designing furniture to creating contemporary interior surfaces, realising this vision took many years of development, researching and refining both the precise mix of concrete and complex casting processes. Tim grew his team and continued to innovate, pushing the boundaries of how concrete can be used.

Over the years we have learned to pare back what we do, and hone what we make. When we started there was no-one to follow, because no-one was making and designing concrete products like we were. These days we focus relentlessly on one thing; making the most beautiful concrete basins anywhere in the world.

That's what we do. That's all we do. And that's enough. ■

Why choose Kast?

Two decades of specialist knowledge and experience

Our team is made up of skilled designers and makers that bring specialist knowledge and experience to every step of the process. From the makers producing the moulds, to the precision engineering behind the refined designs, years of knowledge and experience from each of our disciplines makes our design and engineering process the best it can be.

Each Kast product holds within it our two decades of deep, learned understanding of the material, from way back when our founder Tim first began experimenting with concrete.

Attention to detail makes the difference

All our experience and knowledge means that our quality control and attention to detail is key when it comes to making the moulds, because we know that concrete is only ever as good as the mould from which it was produced. We believe that small details make a difference and it's these small details that set our products apart.

The same care and attention to detail is carried throughout all stages of production, before each item is carefully packaged for dispatch around the world.

From design to delivery, we take pride in the quality of our products.

Real, authentic concrete

Our concrete is aggregate-based concrete. Real, authentic concrete using limestone from local suppliers in Derbyshire alongside specially sourced

sands and high-quality pigments that are carefully blended to create the most aesthetically refined mixes anywhere in the world.

Our expertise comes in our ability to consistently manipulate a specific concrete mix design for each basin. Our mastery of the material is down to years of testing and refining our specialist mixes and casting processes to deliver outstanding strength, durability and silk-smooth finishes every time.

Different by design

Our specialist factory on the edge of Sherwood Forest is also home to our design studio. Tim set Kast up like this deliberately, so that any design that we conceive can be tested, refined and made right here.

Design-led thinking, cutting-edge manufacturing processes and bold experimentation are all at the heart of Kast. We have full control and flexibility when it comes to designing and making, and it's what allows us to continue to improve and innovate.

Market leaders

Kast became the first dedicated collection of concrete wash basins in the world which now encompasses a diverse range of designs, each with a unique aesthetic that is integral to the character of the material. We continue to lead the way in concrete product design, pushing the boundaries of form, colour and material.

That's why Kast has become the choice of homeowners, designers and architects around the world. ■

The material

Concrete is a unique, timeless material.

Starting out life as a liquid, concrete in its natural form is unlike any other stone. Its versatility enables us to engineer products that push the boundaries of design. Our unique product range is a perfect example of what can be achieved with this liquid stone. From simple monolithic forms to refined contours and patterned surfaces, our ever-growing product range sets a precedent for what can be achieved with this material.

Concrete is inherently unpredictable, but that's part of its charm. We've spent the last two decades learning how to master it through practical applied research to produce the most aesthetically refined mixes anywhere in the world.

Our extensive knowledge and experience of working with this liquid stone allows us to push the material to its limits. It means we're able to design out the inherent limitations of concrete and create extraordinary products with it.

Not only this, all Kast products are made from traditional, aggregate-based concrete. Real, authentic concrete using limestone from local suppliers in Derbyshire alongside specially sourced sands and high-quality pigments that are carefully blended to create the Kast palette of 28 colours.

We choose not to use glass fibre reinforced concrete as we prefer the aesthetic integrity of traditional, aggregate-based concrete. Our unique combination of aggregates naturally enhances the strength of our concrete and provides volume stability and durability. The depth of texture that occurs visually as a result of carefully blended aggregates and cement creates a solid, tactile aesthetic with organic, stone-like characteristics.

Rich in both colour and character, our concrete creates an inimitable quality that brings vibrancy and life to every product. ■

Canvas

A series of patterned basins that celebrate the design possibilities of concrete through refined surface pattern.

The expressive outer designs range from subtle geometric textures to highly defined, sculptural surfaces rich in dramatic shadows.

With a bold and non-conformist attitude growing amongst interior design trends, the Kast Canvas range of patterned concrete basins encourages this mentality to experiment and push boundaries with design.

Aura.

A slim pill-shaped basin featuring subtle contours and offset vanity space. The vanity space hides the waste and is available with or without the ribbed surface pattern

Options

- Left or right hand basin
- Wall or surface mounting
- Wall brackets included
- For use with wall mounted tap
- Compatible with all standard unslotted wastes
- Taps, trap + waste not included
- Non-patterned insert option

Holm

Inspired by the timeless allure of terrazzo, Holm seamlessly integrates the speckled visuals of this material with the refined tactility of concrete. The collection, featuring basins named Anno, Nema and Mesa, transcends mere functionality, transforming into artworks that make a lasting impression. Embracing a concept of understated elegance, the basin shapes are minimal and contemporary in form, serving as a canvas that accentuates and compliments the dynamic textures of the terrazzo inserts.

K Holm
collection

Anno.

A circular countertop basin defined by its terrazzo insert, offering a dynamic speckled texture for added depth and texture

Options

- Surface mounting
- Compatible with all standard unslotted wastes

Kast colours

Weight

All Kast basins are made from real, authentic concrete using specially sourced aggregates, sand and cement. As a result all Kast basins will be heavy and it is the client's responsibility to ensure that the brackets are fixed sufficiently to a structural wall in order to support the basins. Custom basin weights can be provided as an estimation and then confirmed once the basin has been produced if required.

Brackets

All wall hung basins will be supplied with steel wall mounting brackets. To ensure that the basin weight is fully supported, brackets must be recessed into the wall by 10–30mm and fixed to an appropriate wall substrate such as timber or metal studding. All brackets for bespoke work will be judged accordingly by a member of the design team. Overall sizes will then be detailed on the manufactured drawings and require sign off by the client before going into production. Since applications and site conditions vary, the installer is responsible for ensuring proper installation of the basin.

Frames

As an alternative option to wall mounting your basin, Kast can also supply you with a steel frame, powder coated to any RAL colour, customised to the size of your sink. Frame costs are calculated based on the overall size and specification. If you would like to explore the options available please contact a member of the Kast team.

Overflows

As standard all Kast basins are not designed to include an overflow. If this is a project requirement please contact a member of the Kast team to discuss your custom requirements and the options available.

Tap-holes

All Kast basins that are designed to include tap holes can be supplied with the tap holes pre-drilled unless stated otherwise. Tap holes cannot be drilled until hole size and location has been confirmed by the client. Tap holes must be confirmed at time of order or lead time may be affected. Alternatively sinks can be supplied without the holes drilled and these can be drilled on site. Please contact a member of the Kast team who can advise how best to do so.

Care & Maintenance

Kast basins are made from a specialist concrete mix developed to increase strength, durability and stain resistance. Our sealing system provides the most effective protection whilst maintaining the natural look and feel of the concrete. Concrete however, like any stone, can stain and chip if not treated with care. Much like a natural stone or timber, concrete will also naturally patina over time and will evolve depending on the usage and surroundings.

To help maintain your Kast Concrete Basin, we provide the following guidelines:

When cleaning your basin, Kast advises using a soft cloth and a PH neutral cleaner with warm water. Kast basins must NOT be cleaned with any products containing bleach or harsh chemicals. Basins should be rinsed thoroughly and dried after cleaning.

Avoid leaving any liquids on the surface, especially liquids containing acids or alkali as these may cause erosion to the surface of the concrete. If liquids containing these properties do come into contact with the surface we recommend these are wiped away as soon as possible.

Kast basins must NOT be rubbed with abrasive materials such as scouring pads, abrasive sponge-backs or wire wool as this may result in scratching and permanent damage to the surface.

Avoid leaving any items on the surface that may allow a vacuum to form underneath e.g. a cup or bottle etc. Leaving items on the surface for a period of time can cause a difference in surface texture.

As an additional protective barrier Kast basins can be waxed regularly with a soft cloth as and when required.

Avoid impact from heavy objects directly onto the concrete surface. Although concrete is a very durable material the edges are most vulnerable and impact can cause chipping, cracking and in some situations, breakages.

Following these guidelines will limit the effects of everyday use and keep your concrete in the best condition. Staining, scratching and chipping can however occur; Please see terms and conditions.

For further information or advice please refer to our Advisory Document or contact info@kastconcretebasins.com

Warranty

All Kast products have a warranty of 2 years against structural failings only. It is advised that all Kast basins are fully inspected within 12 hours of delivery and any issues are reported to a member of the Kast team immediately. If there is damage to your concrete basin, Kast will recommend the best solution. Due to the semi-bespoke nature of the products, Kast does not offer refunds. For more information please refer to our Terms & Conditions.

Product care

Kast custom basins can be produced to specific requirements to suit any bathroom or utility space for both residential and commercial markets. Specially designed and handcrafted in our factory, each bespoke basin mould is uniquely produced, cast and finished in your chosen colour.

The Kast design team can work with you to realise your concepts through detailed drawings and sampling. Please visit our website or contact us directly for any bespoke commissions.

Kast Tree Planting

As part of our continued environmental commitment, for every basin purchased we make a contribution to reforestation organisations. Each basin we sell results in a tree being planted in nations across the world, from the UK, where we are based, to Europe, Africa, Asia and the Americas. By choosing Kast, you are helping to support a greener future for generations to come.
